DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of the 1 May 2006 restriction requirement in the reply filed on 1 June 2006 is acknowledged. The traversal is on the ground(s) that the search and examination of the entire application would not place a serious burden on the examiner. This is not found persuasive because the claimed inventions are drawn to differently structured apparatus and methods with different steps, such that while there may be some overlap, search of the entire application would require several independent and different searches. Traversals to prior restriction requirements were based on the same reasoning and are not found convincing for the same reason expressed above.

The requirement is still deemed proper and is therefore made FINAL.

2. Claims 6-25 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected inventions, there being no allowable generic or linking claim.

Claim Objections

3. Claims 1-5 are objected to because of the following informalities: The words "chemical oxide removal" should be written out at least the first time they are introduced in a set of independent and its dependent claims, so that it is clear what is being claimed. Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,174,881 to Iwasaki et al.

Application/Control Number: 10/801,012 Page 3

Art Unit: 1763

- 6. Iwasaki et all disclose a processed object processing apparatus that processes objects to be processed; comprising: a plurality of treatment systems (Figure 11, 37 and 38) that are communicably connected in a line and in which the objects to be processed are processed; and a load lock system (40 and 41) that is communicably connected to said treatment systems, said load lock system having a transfer mechanism (27 a-d) that transfers the objects to be processed into and out of each of said treatment systems; wherein at least one of said treatment systems is a vacuum treatment system (column 18, row 68 through column 19, row 2 and column 19, rows 27-29), and said load lock system is disposed in a position so as to form a line with said treatment systems.
- 7. With respect to claim 2, one of the treatment systems may be a treatment system for chemical oxide removal (column 18, rows 68 through column 19, rows 21).
- 8. With respect to claim 3, said at least one vacuum treatment system is a heat treatment system (column 15, rows 58-59) that is connected to said chemical oxide removal system, the heat treatment is carried out on objects to be processed that have been subjected to a chemical oxide removal treatment. Examiner notes with respect to the order of treatment, which is viewed as an intended use, that the courts have ruled that a claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. Ex parte Masham, 2 USPQ2d 1647 (Bd. Pat. App. & Inter. 1987)
- 9. With respect to claim 4, each of the chemical oxide removal treatment system and the heat treatment system are only accessed by load lock chambers in a vacuum state and are never exposed to atmosphere.
- 10. With respect to claim 5, as described above, said load lock system is disposed in a position such as to form a line with said at least one vacuum treatment system.

Conclusion

Page 4

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

USP's 6,335,261 and 6,858,532 also teach integration of a CVD process chamber with a chemical oxide

removal chamber.

Any inquiry concerning this communication or earlier communications from the examiner should

be directed to Karla Moore whose telephone number is 571.272.1440. The examiner can normally be

reached on Monday-Friday, 9:00 am-6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Parviz Hassanzadeh can be reached on 571.272.1435. The fax phone number for the organization

where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be obtained from

either Private PAIR or Public PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC)

at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative

or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-

1000.
